LANDIS NAMED DEPUTY CHIEF, EROS DATA CENTER

The promotion of Glenn H. Landis to the position of Deputy Chief, EROS Data Center, has been announced by Allen H. Watkins, Chief of the Data Center.

Landis has been Chief of the Data Production and Technical Support Branch of the Center. In addition to his new responsibilities, he will continue to serve as Acting Chief of that Branch until a successor is named.

In December of 1970, Landis was selected and assigned the task of establishing the EROS Data Center as a part of the Department of the Interior, EROS Program. He was primarily responsible for the facility system design, the selection and training of initial personnel, and the acquisition of system facilities and hardware needed to implement the highly specialized photographic processing activity.

A graduate of Pennsylvania State College with a bachelor of science degree in forestry, he received his master of science degree in forestry and photogrammetric engineering from Pennsylvania State University.

Prior to his employment with the federal government, he was involved in development of remote sensing equipment and techniques and quality assurance, in private industry.

Mr. and Mrs. Landis reside in Sioux Falls.
